DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-3, drawn to a gas flow catalyst bed reactor assembly, classified in class 422, subclass 218.
 - II. Claims 4-8, drawn to a process for improving fluid flow uniformity in a gas phase reactor and a process for improving catalyst life in an ethylbenzene dehydrogenation reactor, classified in class 423, subclass --- and class 585, subclass 440.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus as claimed can be used to practice another and materially different process, such as the gasification of biomass or the synthesis of ammonia.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, their recognized divergent subject matter, and search required for Group I not required for Group II, restriction for examination purposes as indicated is proper.

2. If applicants elect group II, restriction to one of the following inventions is required under 35 U.S.C. 121:

IIA. Claims 4-6, drawn to a process for improving fluid flow uniformity, classified in class 423, subclass ---.

IIB. Claims 7-8, drawn to a process for improving catalyst life in an ethylbenzene dehydrogenation reactor, classified in class 585, subclass 440.

Inventions IIA and IIB are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the different inventions are not connected in design, operation, or effect and therefore the facts relied upon for this conclusion are in essence the reasons for insisting upon restriction.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, their recognized divergent subject matter, and search required for Group IIA not required for Group IIB, restriction for examination purposes as indicated is proper.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1764

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
